

EYEBROW AFTERCARE

Please apply Aquafor ointment 7-10 days. Avoid swimming, direct sunlight, excessive sweating and direct water pressure from your shower head for 72 hours. Do not pick at or rub the area. Creams with retinols will cause the brows to fade.

EYELINER AFTERCARE

Eyes may be swollen and tender for a few days. This is normal and will dissipate quickly. Itching is also normal. An ice pack protected with a wet barrier so as not to stick to the eyelid is fine. Do not ice for more than 10 minutes at a time. Ice is only needed in the first 24 hours. Sleeping slightly elevated can also reduce swelling. The most swelling will occur the morning after your procedure. It might be a good idea to protect your clean pillowcase from any possibility of pigment rubbing off during your sleep. If eyes stick together use a wet cotton swab to gently remove the eye matter. Do not rub peel or pick at your eyes. Do not let the area dry out keep the aquafor application going for at least the first 72 hours. Avoid being in the sun, pool, and sauna. Do not use any night creams in the eye area until after they have healed. I recommend you purchase a new tube of mascara. Do not use any mascara for the first 72 hours after the procedure.

LIP AFTERCARE

Lips will feel swollen and dry after the procedure. Gently use Aquafor several times a day for at least 14 days. Do not allow lips to dry out. Always use a clean applicator or wash hands before applying ointment. Some of the pigment may come off on your pillowcase.

After the lips are no longer tender to the touch and the healing process begins there may be peeling and flaking of the pigment. This is normal. Avoid swimming pools, beaches, direct sunlight, and tanning beds. Please be gentle with your lips during the healing process. It is a good idea to brush your teeth with water only for at least 72 hours. Avoid use of Glycolic acid, fruit or Hydroxy acids on the lips. This can cause them to fade. Avoid oily, salty acidic foods while in the healing process. Yes, this includes alcoholic drinks or wine.

Lips are a muscle and will need 1-3 sessions to complete the process. Lips can be very unpredictable. Some clients will yield a very strong healed color and others a more subtle color. Lip retouches must be scheduled 30 to 45 days apart from the initial session to allow for the complete healing process and to help with retaining the color. There are usually three stages to the healing process.

TOO DARK. TO LIGHT. JUST RIGHT.

I recommend using a listening device with ear buds during any of the procedures to help with relaxation, and no cell phone usage unless it's an emergency.
